Parmis Toilet

Parmis toilet is the first domestically produced tankless toilet with an electric flush system. The Parmis toilet operates without a water cistern and instead directly connects to the water main's supply.

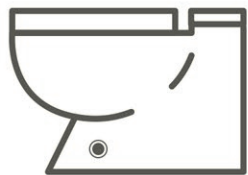

Tankless

Hygienic Toilet

Rimless design: The innovative open rim design enables perfect flushing results and easy cleaning.

The design also features a foot touch flush button at the base of the toilet to enhance user comfort and improve hygiene in public spaces.

Smart Flushing

The smart flushing system includes two electric valves and a programmable control board to adjust the duration of the turbo flush. The high power flush ensures a thorough clean of all bowl surfaces whilst also reducing water consumption by up to 30%. An additional benefit of the electric flush system is a significant reduction in flushing noise, making it ideal for residential spaces and ensuite bathrooms.

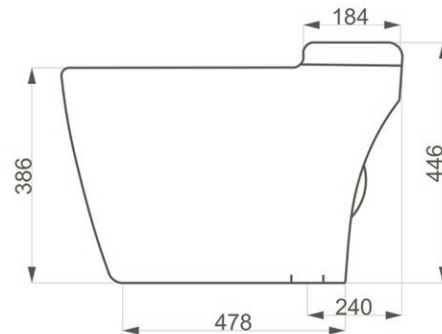

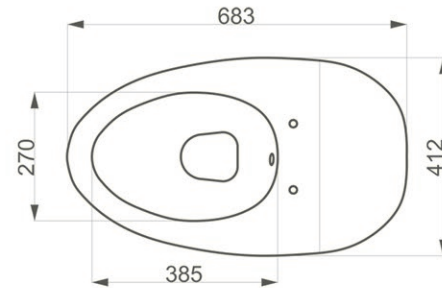

Powerful Flush
Performance

Specifications

- Material: Ceramic
- Length: 683 mm
- Width: 412 mm
- Colours: ● ● ○

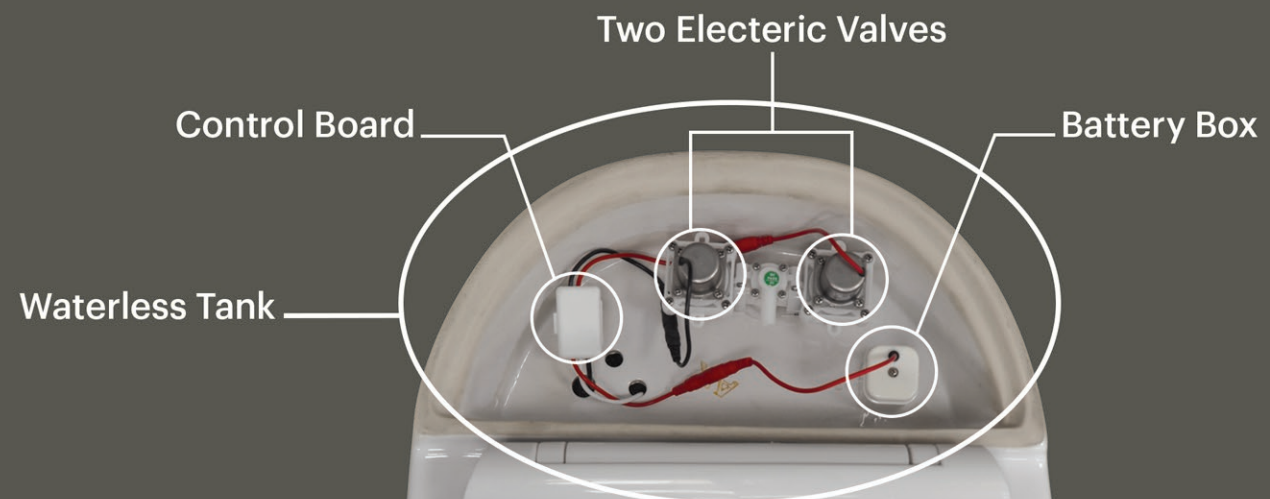

- Height: 386 mm
- S-Trap: 240 mm
- Weight: 37 kg

● **Hand Button**

- High quality surface coating glaze for a sparkling shine improving hygiene, making it scratchproof and easy to look after.
- Soft close seat for a gentle, quiet close.
- No cistern or float, eliminating the possibility of water leakage and making maintenance and repairs simple.
- Easy installation, includes with all necessary fittings and an installation manual.
